Susan J. Done, MA MB BChir, MBA, PhD, FRCPC

Pathologist, UHN

Cancer Clinical Research Unit, Princess Margaret Cancer Centre, UHN

Associate Professor, Departments of Laboratory Medicine and Pathobiology and Medical Biophysics

University of Toronto

TITLE:

How normal is the epithelium next to a breast cancer?

OBJECTIVES:

1. To understand different approaches that can be taken to try to find some of the earliest molecular alterations that lead to carcinoma.
2. To appreciate the heterogeneity that exists between and within individual breast cancers.

The webcast is scheduled to begin at 4:05 pm. A few minutes before this time, please:

1. Click the link: <http://streaming.med.utoronto.ca/31148>
2. Type in your name and press Enter
 - A high-speed internet connection is recommended.
 - Ensure your browser (IE, Firefox, Chrome or Safari) is up to date.
 - Headphone or earbuds are recommended.
 - For about 10 minutes before the session begins, there will be a video with music playing. Use this time to adjust the sound on your computer, if necessary.
 - The presentation will be approximately 45-minutes followed by a Q & A period. To ask a question, type it into the chat box and the presenter will respond to it verbally.
3. After the webcast, please consider providing input into how to improve future LMP webcasts, topics of interest, frequency of webinars, potential speakers for future presentations, etc. Please email your thoughts to Myron Cybulsky (myron.cybulsky@utoronto.ca). Thank you.
